

GENERAL SESSION V: QUESTION AND ANSWER SESSION®

Douglas Justice: What's the name of that ginger relative?

Luen Miller: It's sold as *Kaempferia grandifolia*.

Ernesto Sandoval: What species of *Erythrina* did you show and how hardy is it?

Luen Miller: The species is *humeana*. As for hardiness, it starts to lose tips when you start to get some frosts, but as it grows larger it becomes progressively more resistant to frosts.
