
Tuesday Session I: Questions and Answers

Douglas Justice: When using your 24-h hot water soak, is it hot the whole time?

Neal Funston: Starts out hot and then cools off.

Mike Bone: I noticed in some of your slides it looked like you were growing in pure gravel, is that one of your seed mixes?

Neal Funston: No, actually we grow in a perlite-peat mixture and we topdress the seeds with a gravel layer.

Betsy Baldwin-Owens: How do you transplant the seedlings?

Neal Funston: We use chopsticks to tease them out one at a time.
