

## Questions and Answers: Session I, Friday, 2 October, 8:00–10:00 AM<sup>®</sup>

**Jonathan Manning:** Are there salt build-up problems in the water or the media with your flood system? If so, how do you deal with them?

**Richard Wilson:** The pH may increase and you have to stay on top of that. We have a valve in-ground that automatically adjusts EC which can also rise over a period of time. We add fresh water to counteract the EC increases.

**Jonathan Manning:** Does the chlorination process add to the salt build-up?

**Richard Wilson:** No, not the kind of chlorination we use.
